MAQUINÁRIA AGRÍCOLA SEGUÉS at the farmer's side since 1978.

The collectors are machines especially suitable for the collection of fruits of the forest such as chestnuts, hazelnuts, almonds, walnuts, etc. its small size allows it to be used with small and medium-power tractors, facilitating access to collection areas. The rakes allow to form rows of product on the ground facilitating the collection with the collectors.

STRENGTHS POINT OF COLLECTORS:

- The machine can be used at the same time to collect small or larger dried fruits, with the help of the vacuum cleaner.
- The flexible suction tube has a remarkable length to allow working also in areas of difficult access as well as different diameters depending on the fruit to be harvested.

K530

TECHNICAL CHARACTERISTICS

MODEL	HIGHT (mm)	LENGHT (mm)	WIDE (mm)	POWER (kw)	LONG SUCTION TUBE (mm)	Ø SUCTION MOUTH (mm)	WEIGHT (kg)
K100	1.900	1.100	1.600	SELF-PROPELLED (9,7)	8.000		240
K530	1.400	1.700	1.150	20 / 25	10.000		200
K1500	2.200	1.500	1.600	50	7.000	140	500
EU1000	1.700	1.300	1.700	23	12.000	100	320
EU2000	1.650	1.100	1.700	27	15.000 / 25.000	100 / 120	370

STRONG POINTS OF RAKES:

- Placed in the front part of the tractor and a working width regulated by hydraulic cylinders, it allows to form rows of product on the ground, which facilitates the collection by means of the collectors with aspiration.

K1800

Front rake with a working width of 3,000-5000 (mm) regulated with hydraulic cylinders

The EU2000 model when it is for chestnuts does not have a cyclone.

K100 self-propelled collector

The K1500 model can be used for olives trees

EU1000

K1800 mechanical suction collector with rake and collection box at the front of the tractor.
